

A Question to Ponder

Why do so many other languages disrespect Perl but they all claim to have Perl Compatible Regular Expressions?

Make noise if
you played with
one of these
building toys.

Lincoln Logs

Tinker Toys

Kenner

K'nex

Erector (Mechano outside the US)

Lego

Remember the fun?

Only limited by your
imagination

Way more fun
than most
coding projects

Many possible
projects from
the same
set of parts

You are the
architect
and builder

What do those
building toys
have in common?

Most any part
can connect
with any part

Simple toy
parts can build
complex things

Do you use
File::Slurp?

You can hire
its author,
ME!

Let's make
programming
fun again!

Dataflow is a way
to organize, architect
and build your
applications

Dataflow has a
Universal API

Any node can send
data to any node

A very well known
Universal API:

Shell tools,
stdio and pipes

Simple modules
that do one thing
and do it well

Complexity
arises
from
layers
of
simplicity

External configuration:

Initialize nodes with
addresses and
arguments

Each node is given a
unique address

Configuration is
architecture done by
the intelligent
designer (you!), not
in the code

With dataflow
you actually have to
think differentLY

If you are interested in
dataflow, contact me at
dataflow@perlhunter.com

If you have a
dataflow, project,
contact me today

If you have funding for
a dataflow project,
contact me yesterday!

Dataflow Article
Coming Soon

A punishing line from the
dataflow article:

Larry **sed** with a **lisp**:
'**awk**' and '**grep**' are the
basic sounds I **make** when
I **c** too much data flow
